

Assignment-2

Day 5: Operating System information, windows, Linux, macOS installation and adjust OS settings

Task-1: - On your Windows laptop or PC, open 'System Information' and take a screenshot showing your OS version, processor, and RAM details.

Item	Value
OS Name	Microsoft Windows 11 Home Single Language
Version	10.0.26200 Build 26200
Other OS Description	Not Available
OS Manufacturer	Microsoft Corporation
System Name	LAPTOP-TEKAVELV
System Manufacturer	HP
System Model	Victus by HP Gaming Laptop 15-fa1xxx
System Type	x64-based PC
System SKU	A18QBPA#ACJ
Processor	12th Gen Intel(R) Core(TM) i5-12450H, 2000 Mhz, 8 Core(s), 12 Logical Proc...
BIOS Version/Date	AMI F.18, 21-08-2024

Task-2: - Download any official Linux distribution ISO (like Ubuntu or Fedora), and use Rufus or Balen Etcher to create a bootable USB drive for installation.

Steps:

1. Download the official **Ubuntu ISO** file.
2. Insert a USB flash drive into the computer.
3. Download and open **Rufus**.
4. Select the connected USB drive under **Device**.
5. Select the downloaded Ubuntu ISO under **Boot selection**.
6. Keep the recommended settings unless you have a specific requirement.
7. Click **Start**.
8. Confirm the warning that the USB drive will be erased.
9. Wait until Rufus finishes creating the bootable USB.
10. Safely eject the USB after the process is complete.

Result: A bootable Ubuntu USB drive is created and can be used to start Ubuntu installation.

Task-3: - On a macOS device (or using a macOS virtual machine), open 'System Preferences' and change the desktop wallpaper, then adjust the system language to Hindi or Gujarati.

Change Desktop Wallpaper:

1. Open **System Preferences** (called **System Settings** on newer macOS versions).
2. Select **Desktop & Screen Saver** or **Wallpaper**.
3. Choose a wallpaper from the available options.
4. Close the settings after selecting the wallpaper.

Change System Language:

1. Open **System Preferences/System Settings**.
2. Select **Language & Region**.
3. Click **+** to add a language.
4. Select **Hindi** or **Gujarati**.
5. Choose the language as the **primary language** if you want the entire interface to use it.
6. Restart or log out if macOS asks you to do so.

Result: The desktop wallpaper is changed and the selected language is added/set as the system language.

Task-4: - Install a fresh copy of Ubuntu Linux (real or virtual machine) and create a new user account named 'gamer'. After installation, enable

automatic login for this user and take a screenshot of the login screen showing the username.

Task-5: - Use ChatGPT to generate a step-by-step guide for installing Windows 10 on a laptop, including partitioning tips and post-installation settings for privacy and updates. Follow the guide and note any steps that were unclear or missing.

Important: A fresh Windows installation can erase files and partitions. Back up important files before starting. Also, Windows 10 reached end of support on **October 14, 2025**, so for a new installation, Windows 11 is generally preferable when the hardware supports it. If your assignment specifically requires Windows 10, use it only for the practical exercise.

A. Prepare the Installation Media

1. Back up important personal files to an external drive or cloud storage.
2. Obtain an official Windows 10 installation ISO/media.
3. Create a bootable USB using a suitable tool.
4. Keep the laptop connected to its charger during installation.
5. Make sure you have the required Windows product key or digital license information.

B. Boot From the USB

6. Insert the Windows installation USB.
7. Restart the laptop.
8. Open the **Boot Menu** using the manufacturer's boot-menu key.
9. Select the USB drive.
10. The Windows Setup screen should appear.

C. Start Installation

11. Select the **language, time/currency**, and **keyboard** options.
12. Click **Install now**.
13. Enter the product key if requested, or choose the option to activate later when appropriate.
14. Select the correct Windows edition if prompted.
15. Accept the Microsoft software license terms.
16. Select **Custom: Install Windows only** for a fresh installation.

D. Partitioning

17. Windows Setup will display the available disks and partitions.
18. **Identify the correct disk carefully before deleting anything.**
19. If you want a completely fresh installation and have already backed up your data, delete the old Windows-related partitions on the intended installation disk.
20. Select the resulting **Unallocated Space**.
21. Click **Next**.
22. Windows will automatically create the required system/recovery partitions.

Partitioning tip: Do **not** delete partitions on another drive just because they look unfamiliar. If the computer contains multiple drives, verify the drive size/model before making changes.

E. Complete Windows Setup

23. Windows will copy files and restart the computer several times.
24. Complete the initial setup.
25. Connect to the internet when appropriate.
26. Create or sign in with the required user account.
27. Choose your privacy settings carefully rather than automatically accepting every optional setting.

F. Post-Installation Settings

28. Open **Settings → Update & Security → Windows Update**.
29. Check for available updates.
30. Install applicable updates and restart the computer when required.

31. Open **Windows Security** and confirm that security protections are enabled.
32. Install the correct drivers if Windows has not installed them automatically.
33. Check **Settings** → **Privacy** and review permissions for location, camera, microphone, contacts, and other data.
34. Remove unnecessary applications and disable unnecessary startup programs.
35. Confirm that **Windows Activation** is properly configured.
36. Create a restore/recovery option and keep a backup of important files.
