

Assignment-2

Day 3: Peripheral Troubleshooting Theory: Common issues and solutions for peripherals. Practical: Troubleshoot a non-working printer.

Task-1: - List 5 common issues users face with USB keyboards or mice on laptops, and write one possible solution for each.

No.	Common Issue	Possible Solution
1	Keyboard or mouse is not detected	Unplug the USB device and connect it to another USB port.
2	Keyboard or mouse stops responding	Restart the laptop and reconnect the device.
3	USB connection keeps disconnecting	Check the USB cable for damage and try another USB port.
4	Some keys or mouse buttons do not work	Clean the device and check whether the problem occurs on another computer.
5	Cursor moves slowly or keyboard input is delayed	Check for background system issues and update the USB/device drivers through Device Manager.

Task-2: - Simulate a troubleshooting flow: Your Bluetooth headphones are not connecting to your phone. Write the exact step-by-step actions you would take to diagnose and fix the issue, mentioning any settings or indicators you would check.

Troubleshooting Steps

1. **Check the headphones' power**
 - a. Make sure the headphones are switched on.
 - b. Check the battery indicator and charge them if necessary.
2. **Turn Bluetooth ON**
 - a. Open the phone's **Settings** → **Bluetooth**.
 - b. Make sure Bluetooth is enabled.
3. **Put headphones into pairing mode**
 - a. Press and hold the Bluetooth/power button until the indicator light starts **flashing** or the headphones announce pairing mode.
4. **Check the available devices**
 - a. Look under **Available Devices** on the phone.
 - b. Check whether the headphone name appears.
5. **Select the headphones**
 - a. Tap the headphone name and wait for the **Connected** indicator.
6. **Check if they are connected to another device**
 - a. If the headphones are already connected to a laptop or another phone, disconnect them from that device.
7. **Forget and pair again**
 - a. If the headphones appear but will not connect, select them and choose **Forget/Unpair**.
 - b. Put the headphones back into pairing mode and search again.
8. **Restart both devices**
 - a. Turn Bluetooth off and on again.
 - b. Restart the phone and headphones.
9. **Check the audio output**
 - a. After connecting, play audio and check that the phone's audio output is set to the Bluetooth headphones.
10. **Reset the headphones**
 - If nothing works, perform the manufacturer's Bluetooth/factory reset procedure and try pairing again.

Task-3: A user reports that their external webcam is not detected during a Zoom call on Windows 10. Write a checklist of 6 things to check or try to resolve the problem

Checklist

1. **Check the USB connection**
 - a. Make sure the webcam is properly connected.
 - b. Try a different USB port and check whether the webcam indicator light turns on.
2. **Check Device Manager**
 - a. Right-click **Start** → **Device Manager**.
 - b. Look under **Cameras, Imaging devices, or Sound, video and game controllers**.
 - c. Check for the webcam and any warning symbols.
3. **Check Windows Camera Privacy Settings**
 - a. Go to **Settings** → **Privacy** → **Camera**.
 - b. Make sure **Allow apps to access your camera** is enabled.
4. **Allow Zoom to use the camera**
 - a. In the Camera privacy settings, make sure desktop apps are allowed to access the camera.
 - b. Close and reopen Zoom after changing the setting.
5. **Select the correct camera in Zoom**
 - a. Open **Zoom** → **Settings** → **Video**.
 - b. Check the **Camera** dropdown and select the external webcam instead of the laptop's built-in camera.
6. **Test and update/reinstall the driver**
 - a. Test the webcam using the Windows **Camera** app.
 - b. If it does not work, update or reinstall its driver through **Device Manager**, then restart the computer.

Task-4: You are helping a friend whose printer is showing 'offline' status on their PC. Describe how you would use the Windows Troubleshooter tool to try to fix the issue and explain what information the tool provides during the process.

Using the Windows Troubleshooter

1. **Check the basic connection**
 - a. Make sure the printer is switched on.
 - b. For USB printers, check the USB cable.
 - c. For wireless printers, make sure the printer and PC are connected to the same Wi-Fi network.
2. **Open Windows Settings**
 - a. Click **Start** → **Settings** → **Devices** → **Printers & scanners**.
3. **Select the printer**
 - a. Find the printer showing **Offline** and select it.
4. **Run the troubleshooter**
 - a. Select **Manage** and look for the available **Troubleshoot** option.
 - b. Follow the instructions provided by Windows.
5. **Allow Windows to diagnose the problem**
 - a. Windows checks common causes such as connection problems, printer configuration, driver issues, and related services.
6. **Follow the recommended fix**
 - a. If Windows finds a problem, it will display the issue and may recommend or apply a solution.

Information Provided by the Troubleshooter

The troubleshooter can indicate:

- Whether the printer is properly connected.
- Whether Windows can communicate with the printer.
- Whether the printer is set as the default printer.
- Whether there are drivers or configuration problems.
- Whether the printer is paused or offline.
- Whether Windows can automatically apply a recommended fix.

Final step: After troubleshooting, print a **test page** to confirm that the printer is working correctly.
