

Assignment-2

Day 4: Connecting and Testing Peripherals Practical: Set up and test peripherals like printers and webcams. Task: Resolve connectivity issues for a given setup.

Task-1: - Connect a USB webcam to your computer, install any required drivers, and verify that the webcam works by opening the default camera app and capturing a photo.

Steps:

1. Connect the **USB webcam** to an available USB port on the computer.
2. Wait for Windows to detect the webcam automatically.
3. If Windows does not install the driver automatically, download and install the **correct driver** from the webcam manufacturer's website.
4. Open **Start** → **Camera** to open the default Windows Camera app.
5. Check that the webcam video is displayed correctly.
6. Adjust the webcam position if required.
7. Click the **Capture/Photo** button to take photographs.
8. Open the saved photo to confirm that the webcam is working properly.

Result: The webcam was successfully connected, detected, and tested using the Camera app.

Task-2: - Set up a local printer (USB or network), install the correct driver, and print a test page to confirm successful installation.

Steps:

1. Switch on the printer and connect it to the computer using a **USB cable**.
(For a network printer, connect the printer and computer to the same network.)
2. Allow Windows to detect the printer.
3. Open **Settings** → **Devices** → **Printers & scanners** in Windows 10.
4. Select **Add a printer or scanner**.
5. Select the connected printer from the list.
6. If required, install the **correct printer driver** from the manufacturer's website.
7. Complete the printer setup.
8. Open the printer settings and select **Manage** → **Print a test page**.
9. Check the printed page for clear text and proper printing.

Result: The printer was successfully installed, and the test page confirmed that it was working correctly.

Task-3: - Simulate a connectivity issue by unplugging the printer's USB cable, then use Windows Device Manager to identify and resolve the 'printer not detected' problem

Simulation: USB Printer

1. First, make sure the printer is working and switched on.
2. Disconnect the **USB cable** connecting the printer to the computer.
3. Open **Device Manager** by right clicking the Start button and selecting **Device Manager**.
4. Check sections such as **Printers**, **Print queues**, or **Universal Serial Bus controllers**.
5. Look for the printer or a device with a **yellow warning/error icon**.
6. Reconnect the printer's USB cable.
7. In Device Manager, click **Action** → **Scan for hardware changes**.
8. Windows should detect the connected printer again.
9. If the device has a driver problem, right-click it and select **Update driver**.
10. If necessary, uninstall the problematic device/driver and restart the computer so Windows can reinstall it.
11. Return to **Settings** → **Devices** → **Printers & scanners** and check whether the printer is detected.
12. Print a **test page** to confirm that the problem has been resolved.

Result: The printer was detected again after reconnecting the USB cable and using **Scan for hardware changes**.

Task-4: - A user reports that their webcam video is not displaying in Zoom, but it works in the default camera app. Troubleshoot and resolve the issue, so the webcam works in both applications

Problem:

The webcam works correctly in the Windows Camera app but does not display video in Zoom.

Troubleshooting Steps:

1. **Close the Camera app**
 - a. Make sure the Camera app is completely closed because another application may be using the webcam.
2. **Close other applications**
 - a. Close Microsoft Teams, Google Meet, Skype, browser tabs, or any other application that may be accessing the camera.
3. **Check Windows camera permissions**
 - a. Go to **Settings** → **Privacy** → **Camera**.
 - b. Make sure camera access is enabled.
 - c. Allow desktop applications to access the camera.
4. **Open Zoom settings**
 - a. Open **Zoom** → **Settings** → **Video**.
 - b. Check the **Camera** option.
5. **Select the correct webcam**
 - a. If multiple cameras are available, select the external USB webcam from the camera list.
6. **Restart Zoom**
 - a. Completely close Zoom and open it again.
 - b. Test the camera using Zoom's video preview.
7. **Check the webcam driver**
 - a. Open **Device Manager** → **Cameras**.
 - b. Check whether the webcam has any warning/error icon.
 - c. Update the driver if necessary.
8. **Restart the computer**
 - a. If the problem continues, restart the computer and test the webcam in Zoom again.

Result: After closing applications that were using the webcam, checking Windows permissions, and selecting the correct camera in Zoom, the webcam should work in both the **Camera app** and **Zoom**.
